Cooperation with IAEA
– Applying IAEA's taxonomy for major nuclear accidents and enlarging dissemination of information worldwide –

- JAEA will systematically organize the collected information related to the Fukushima Accident by use of taxonomy[3)] which is developed by the IAEA. We will revise the taxonomy to appropriately classify the information and give feedback to the IAEA. We will also provide metadata to IAEA/INIS to enlarge disseminate of information worldwide.

  3) Taxonomy

  Taxonomy is a classification scheme. It has a hierarchical structure in which a body of information or knowledge is categorized. JAEA will use the taxonomy developed by the IAEA to preserve and classify knowledge, information, data, etc on major nuclear accidents. The taxonomy is scheduled for publication as an IAEA Report. This taxonomy will undergo regular updating.
