

# **The Ideal Nuclear Non-Proliferation and Nuclear Security and University Education -Based on the Student Session**

---

**Kenta Ochiai**  
**Graduate School of Law, Meiji University**

**The International Forum on Peaceful Use of Nuclear Energy,  
Nuclear Non-Proliferation and Security  
December 10, 2024**

# Table of Contents

1. Overview of the Student Session
2. Nuclear Non-Proliferation and Nuclear Security, and (University) Education
  - 2.1 The Need for Human Resource Development in the Field of Nuclear Non-Proliferation and Nuclear Security / Desired Human Resources
  - 2.2 The interface of Nuclear Non-Proliferation and Nuclear Security Education and Universities
3. Various Research and Education Methods and Student Comments
  - 3.1 Development of Research-oriented Human Resources
  - 3.2 Development of Practice-oriented Human Resources
  - 3.3 Case Study: Approach to Elementary and Junior High School Teachers
4. Summary

# 1. Overview of the Student Session

Topic: The Ideal Form of Nuclear Non-Proliferation and Nuclear Security Education at Universities

Date : November 20, 2024, 17:00-17:30 via ZOOM

## Participated Students

**Yu Nahiro (Ms.)**

Yasuda Women's University  
Graduate School, Education and  
Psychology

**Eva Lisowski (Ms.)**

Institute of Science Tokyo  
School of Environment and Society,  
Nuclear Engineering

**Kenta Ochiai (Mr.)**

Meiji University  
Graduate School of Law

Format: Exchange of opinions on several educational models proposed in advance by ISCN

- The complexity of the field of nuclear non-proliferation and nuclear security and university education
- The necessity of nuclear education, clarification of the desired human resources, and consideration of its status in university education!

## 2. Nuclear Non-Proliferation and Nuclear Security and (University) Education

### 2.1 The **Need for Human Resource Development** in the Field of Nuclear Non-Proliferation and Nuclear Security / Desired Human Resources

#### Background 1: Domestic and International Movements toward the Utilization of Nuclear Energy

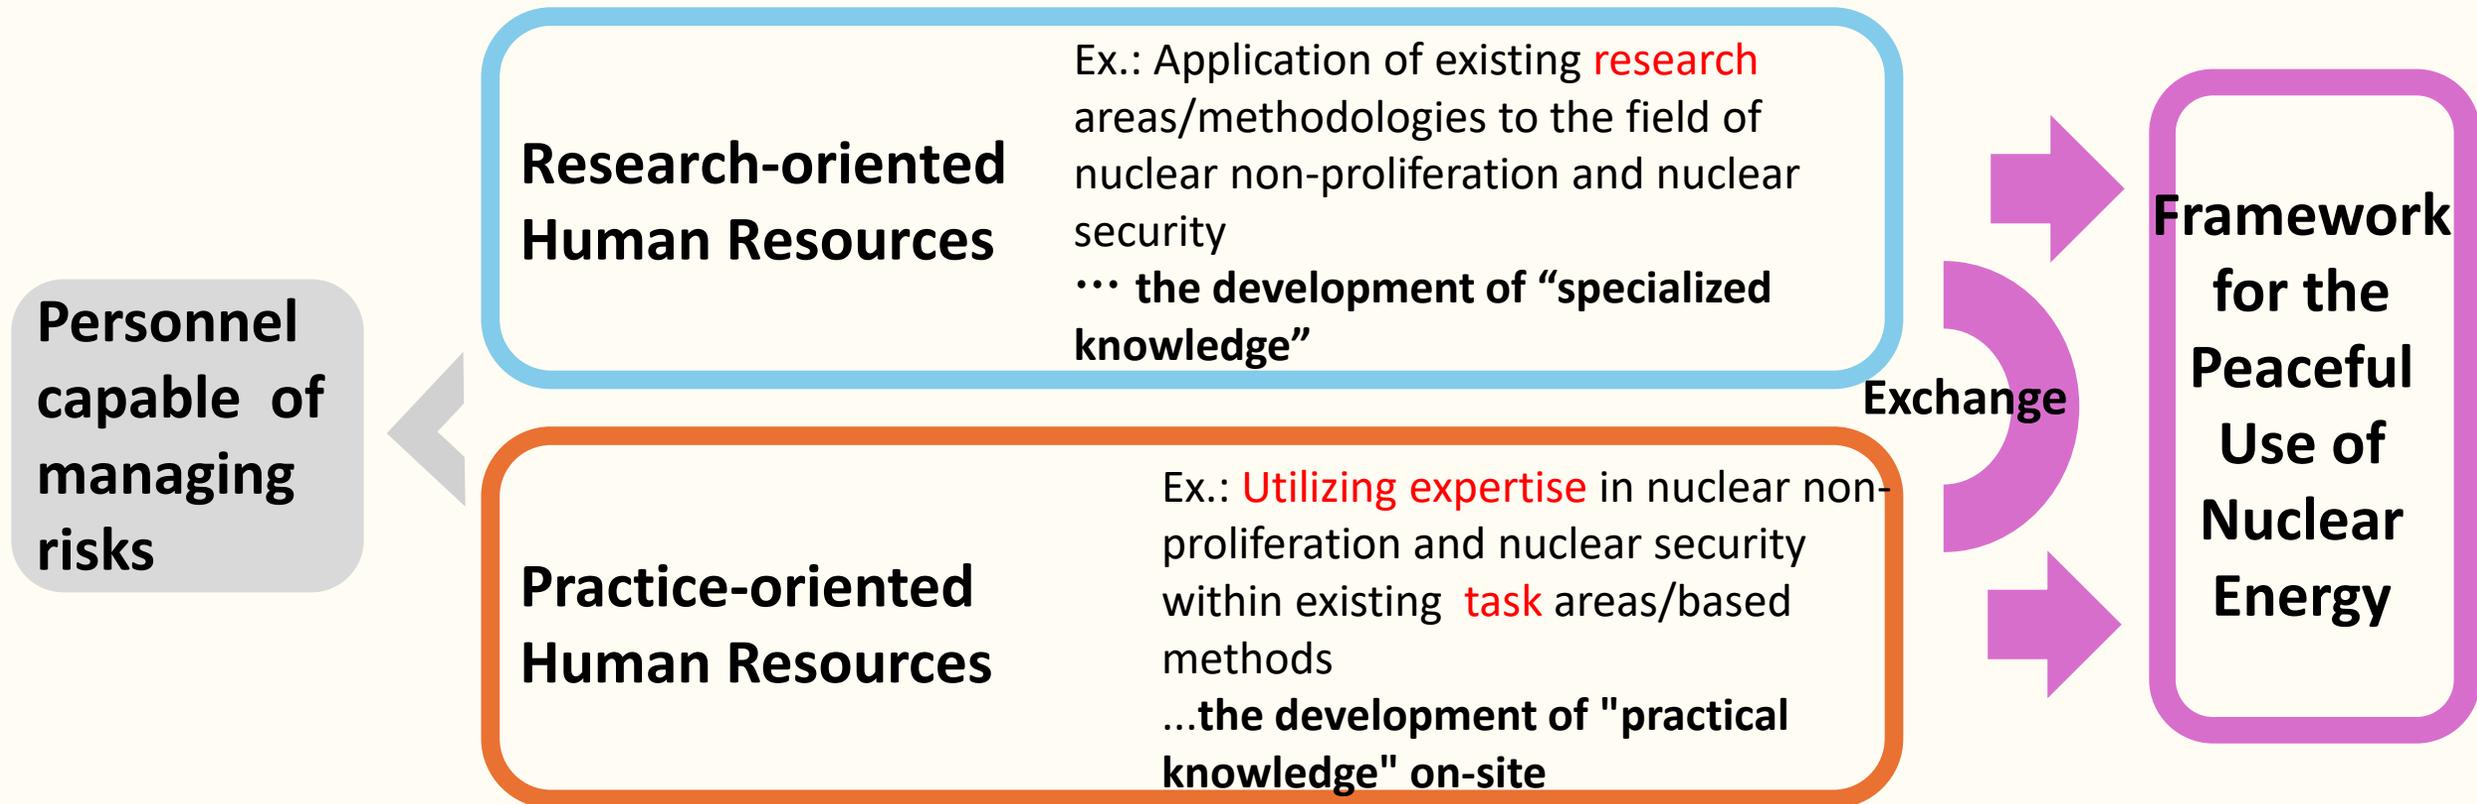

- International **energy transition** such as GX/Carbon Neutral
- Geopolitical risks to thermal power generation fuel
- Development of digital technology
- Importance of risk response in the nuclear field highlighted by the **Ukraine crisis**

#### Background 2: **Shortage of nuclear human resources** in Japan

Simultaneously, the challenge of **developing human resources capable of responding to nuclear non-proliferation and nuclear security risks**

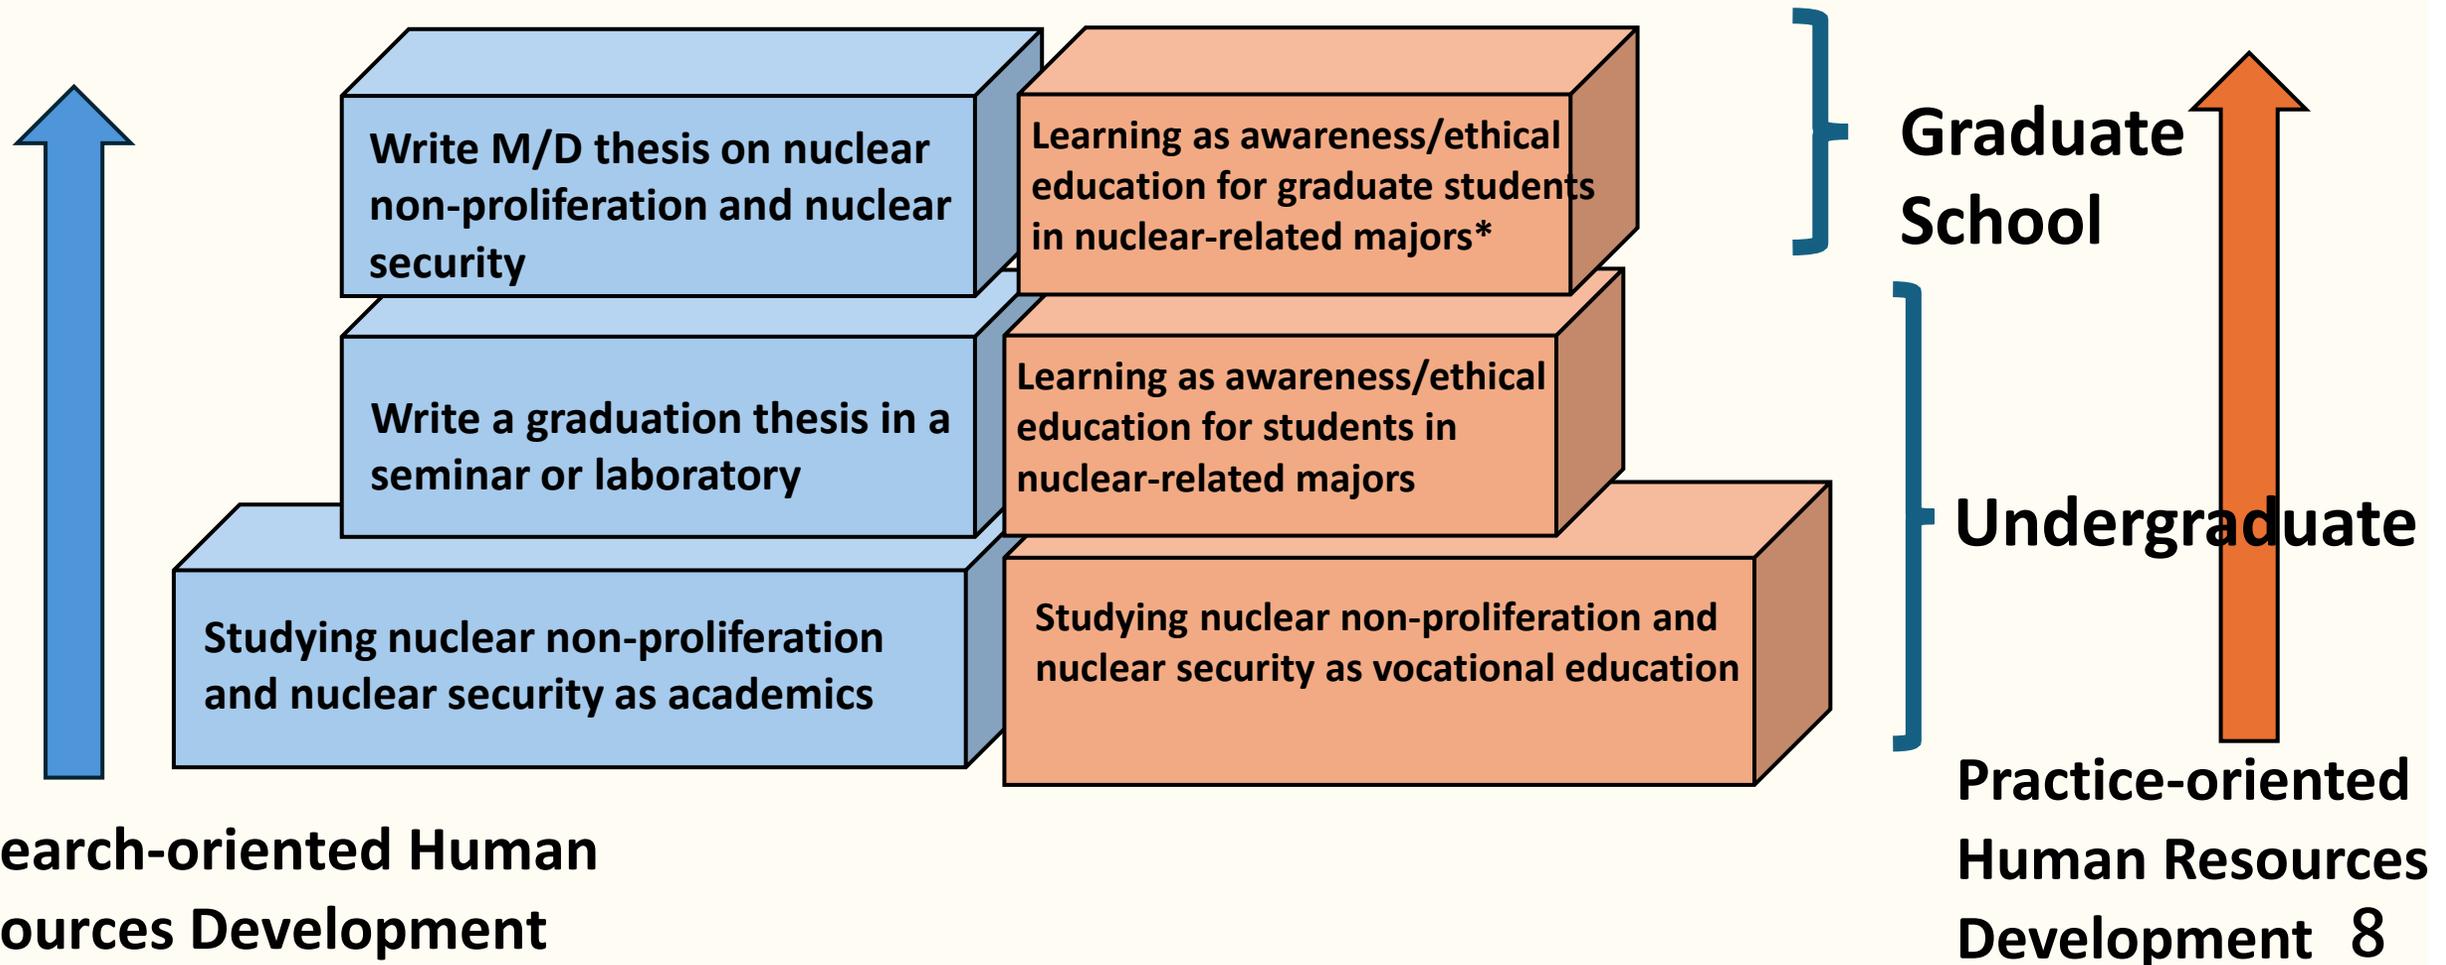

- What is the "ideal personnel to address nuclear non-proliferation and nuclear security risks"?

# The ideal personnel to address nuclear nonproliferation and nuclear security risks

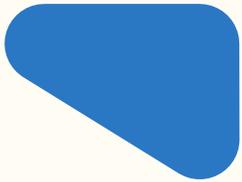

## 2.2 The Interface of Nuclear Non-Proliferation and Nuclear Security Education and Universities

### Possible Research and Conservation-oriented Human Resources Development Flow

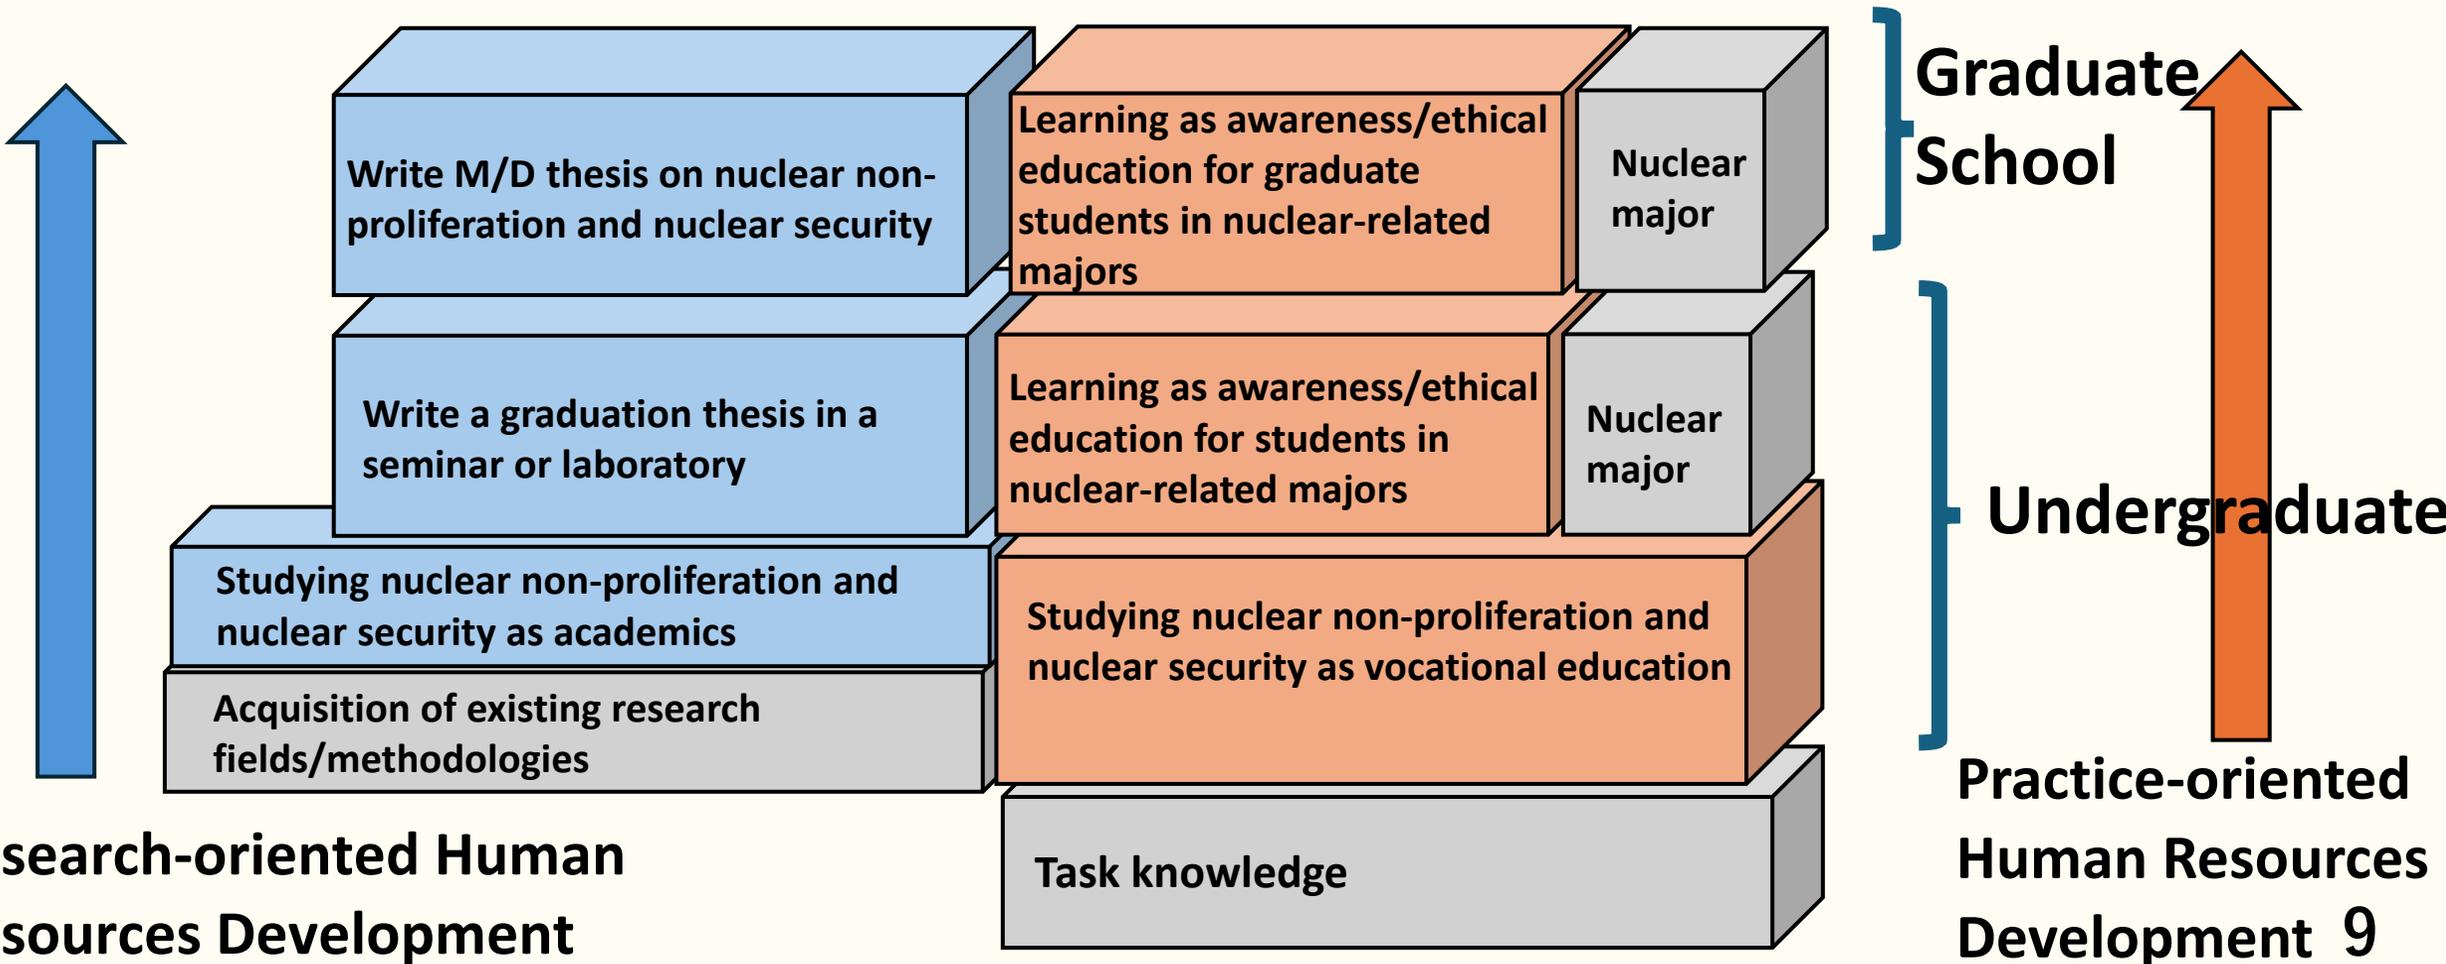

\*For nuclear majors as well as departments that handle radioisotopes within their studies

# 2.2 The Interface of Nuclear Non-Proliferation and Nuclear Security Education and Universities

## Relationship between Research and Conservation-oriented Human Resources Development and Existing (University) Education

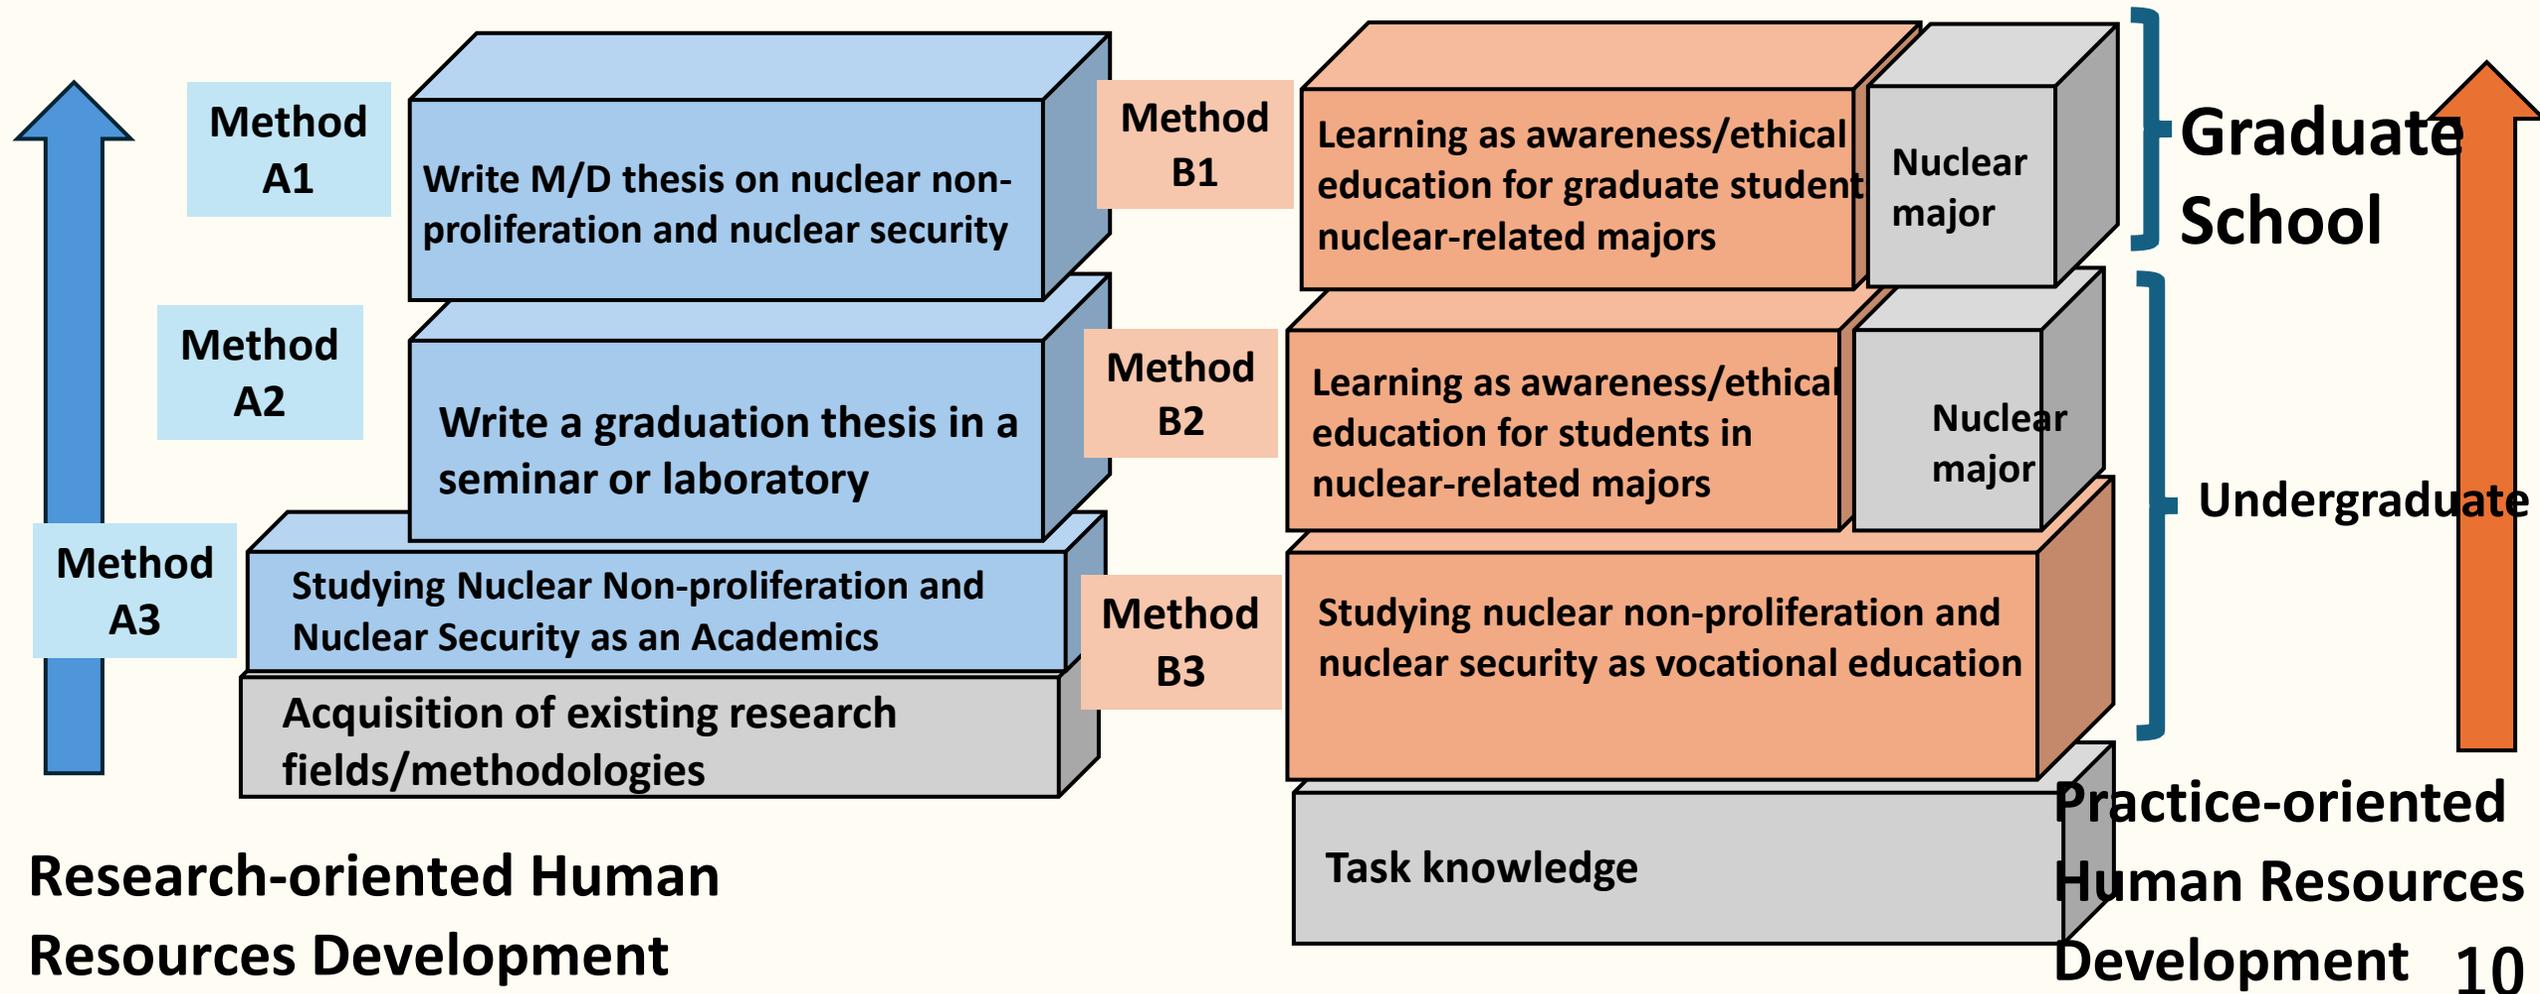

Research-oriented Human Resources Development

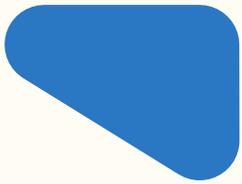

Practice-oriented Human Resources Development 9

## 2.2 The Interface of Nuclear Non-Proliferation and Nuclear Security Education and Universities

### Relationship between Research and Conservation-oriented Human Resources Development and Existing (University) Education

# 3. Various Research and Education Methods and Student Comments

## 3.1 Research-oriented Human Resources Development

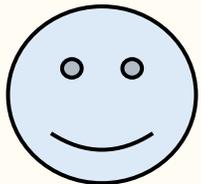

Method  
A1

Graduate  
School

**Write M/D thesis on nuclear non-proliferation and nuclear security**

Ex.) -Establishment of professional graduate schools/courses where degrees in nuclear non-proliferation and nuclear security can be obtained  
-Establishment of lectures and laboratories specializing in nuclear non-proliferation and nuclear security

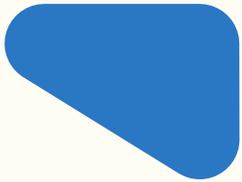

- (Specialized professional graduate schools) should prioritize to define demand and establishing themselves as unique academic fields.
- For countries planning to adopt nuclear power, it is advantageous to create dedicated platforms for conducting research in this area.
- Encouraging collaborative research and fostering interaction with related fields should also be a priority.

• Necessary for students who want to learn more than just (undergraduate) lectures

• Are there places for work for specialized human resources after graduation?

# 3.1 Research-oriented Human Resources Development

Method  
A2

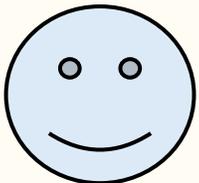

## Write a graduation thesis in a seminar or laboratory

Ex.) -Establishment of courses and laboratories specializing in nuclear nonproliferation and nuclear security  
-ISCN Summer School ※ Long-term and deliverables submission required. Extensive research guidance

(Undergraduate)

- For countries planning to adopt nuclear power, it is advantageous to create dedicated platforms for conducting research in this area.
- Encouraging collaborative research and fostering interaction with related fields should also be a priority.

• Necessary for students who want to learn more than just (undergraduate) lectures

• There is a need for organized research resources and materials that can be referenced when conducting studies on nuclear non-proliferation and nuclear security, such as research monographs, systematic textbooks, and open-access data.

# 3.1 Research-oriented Human Resources Development

Method  
A3

## Studying Nuclear Non-proliferation and Nuclear Security as an Academics

Ex.) -Establishment of lecture courses or implementation of special lectures on nuclear non-proliferation and nuclear security.  
-ISCN Summer School

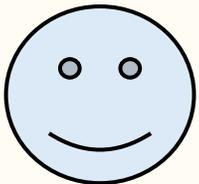

(Undergraduate)

• I believe nuclear non-proliferation should reach and be understood by more people.

• Not only I want people to take an interest, but I also hope they will continue learning after the lectures and maintain opportunities to work or engage in the field.

• Since it is an applied field, the course should be conducted after students have acquired academic methods within their own major.

The typical university lecture is about 45 hours per credit (one 90-minute class per week x 15 classes x 2 terms), but can you find that much volume in the field of nuclear nonproliferation and nuclear security?

# 3. Various Research and Education Methods and Student Comments

## 3.1 Practice-oriented Human Resources

Method  
B1

Learning as awareness/ethical education for graduate students in nuclear-related majors

Method  
B2

Learning as awareness/ethical education for students in nuclear-related majors

Ex.) -In universities with nuclear engineering programs, incorporate education on nuclear non-proliferation and nuclear security as part of the curriculum.

-ISCN Summer School

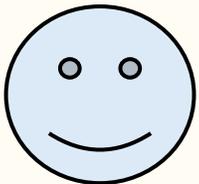

(Graduate ·  
Undergraduate  
School)

• For nuclear engineering majors, it should be a mandatory subject as it contributes to raising awareness.

• The level of emphasis can be adjusted based on the extent to which the field of study involves handling radioactive materials.

• It would be effective to integrate this education into existing research safety or ethical education.

• Ensure students do not panic due to misinformation.

## 3.2 Practice-oriented Human Resources

Method  
B3

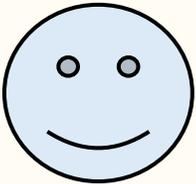

**Learning nuclear non-proliferation and nuclear security as part of professional education**

Ex.) - ISCN's Human Resource Development Support Activities

-ISCN Summer School

(Undergraduate)

- Practical content in specific fields should not be taught as part of general university education.

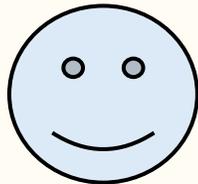

**When discussing this topic, it is important not to confuse vocational education (or public relations for specific industries), safety and ethics education, and research education at universities.**

**→ The role and purpose of university education are being re-evaluated.**

### 3.3 Case Study: Approach to Elementary and Junior High School Teachers

In education theory, it is said that elementary and middle school teachers need to teach radiation education to students, but there are no places for teachers or students to learn about radiation education.

Is it a research issue or a practical problem?

Teachers as research-oriented human resources (applicants)

Issue

"I would like to address 'nuclear non-proliferation and nuclear security education' as a topic for a report or (degree) thesis in the field of education."

Solution

If there are no specialized faculty members at the university, it cannot be properly evaluated.

Teachers as practice-oriented human resources (applicants)

"I am struggling with how to teach nuclear non-proliferation and nuclear security education, which is included as an item in the curriculum guidelines, to students."

Incorporated into the public outreach strategy for the general population.

## additional remarks

---

Despite growing policy imperatives, public consensus for the promotion of nuclear power is still far from being achieved.

Approaches to university education should not be expected to provide a backdoor to the lack of consensus.

In other countries and at the local level, there are active efforts to have the public/citizens discuss the state of energy and reflect this in policy.

# 4. Summary

---

- The theme of "Nuclear Nonproliferation and Nuclear Security Education and Universities" is complex.

It is essential to examine the necessity of such education, clarify the ideal profile of human resources, and consider its position within university education.

- The framework of "Research-oriented Human Resources" forming specialized knowledge and "Practice-oriented Human Resources" forming practical knowledge is effective for human resource development policy formation.
- It is confirmed that vocational education (or public relations for specific industries), safety and ethics education, and research education at universities should not be confused when discussing this theme.

## 2.1 Necessity of human resource development in the field of nuclear nonproliferation and nuclear security

-The author understands the difference between GX and carbon neutrality as follows: “Carbon neutrality is an initiative to make the amount of carbon dioxide emitted equal to the amount of carbon dioxide absorbed. Carbon neutrality is included as one of the activities in the GX. Unlike decarbonization, carbon neutrality does not aim for zero emissions.” Nikkei Crosstec(2024) “Useful Information / ColumnsColumns The difference between GX (Green Transformation) and carbon neutrality explained.
